

MONTHLY REVIEW: MARCHING ON

March 2017

Trump's unsuccessful healthcare bid slapped the brakes on the furious US market rally. Other regions fared better, with Europe's steady recovery efforts finally bearing fruit, allowing markets to remain resilient as Britain formally began its 2-year divorce negotiations. Asia also acquitted itself well, with healthy foreign inflows on the back of a weak USD. Commodities generally closed in the red on waning expectations of global demand.

EQUITY

- US equities eked out marginal gains after two months of rallying. The healthcare bill failure raised concerns over Trump's ability to enact his promised suite of pro-growth policies.
- Europe emerged triumphant this month, even as the UK officially commenced Brexit proceedings. The region's economic engines are gradually revving up again, while populism fears have receded with the moderate Dutch elections outcome and dwindling odds of a Le Pen win in France.
- India led gains in Asia ex Japan, on the back of the BJP's electoral victories and considerable progress on the GST's legislation. Korea came in second, with Samsung's and Apple's new handsets spurring spikes in related sectors. China, last month's winner, took a step back as Beijing's liquidity-tightening raised concerns on its growth outlook.
- Latin America lagged this month, as commodity prices broadly weakened.

FIXED INCOME

- US fixed income prices fell across the board this month on mixed economic sentiment. The Fed rate hikes and sharp upward revision to 4Q GDP turned investors away from treasuries; while dampened expectations of tax reforms and financial deregulations quelled appetites for US High Yields and Investment Grades.
- In emerging markets (EM), fixed income rose as the weaker USD, stronger signs of a global recovery and softer trade rhetoric from the US boded well for EM growth.
- The Asian USD bond market edged up in March as overall US treasury yields and credit spreads closed the month flat.

COMMODITIES

- March turned out to be a poor month for commodities, in the face of a tepid global demand outlook.
- Base metals slumped, after pessimism towards Trump's \$1-trillion infrastructure agenda sprouted following the healthcare bill collapse. A growing number of Chinese cities have also been implementing property curbs, fastening shackles on the nation's real estate boom.
- Aluminium was the lone gainer after China, the world's largest aluminium supplier, passed an "Air Pollution Control" order that would substantially cut aluminium production; copper prices were further tugged down in light of a rise in London Metal Exchange stockpiles.
- Oil fell as the unprecedented increase in US rig count exacerbated the global supply glut.

CURRENCIES

- ▶ The Russian Ruble strengthened as Russia's inflation fell to 5-year lows, making it poised to reach the central bank's 4% target soon.
- ▶ The Indian Rupee's rise was driven by a surge in foreign buying as the BJP's victories and GST progress boosted investor confidence. The Japanese yen rose as a safe-haven asset as investors moderated their previous expectations of blistering US growth.
- ▶ The British Pound was lifted by better-than-expected retail sales and inflation numbers, while the Euro rose on reassuring inflation and growth data.
- ▶ The Brazilian Real slipped on worries that an expanding corruption probe would undermine the ruling coalition's reform efforts.
- ▶ The US dollar slumped following doubts over Trump's ability to materialize his pro-growth agenda, and the Fed's dovish tones.

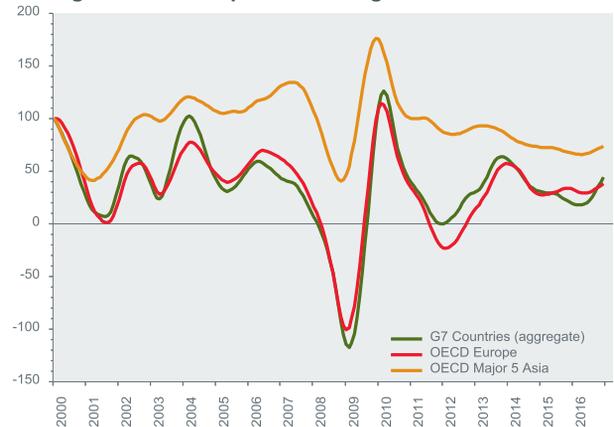

Fig.4. Currencies Performance versus USD (%)

ECONOMICS

- ▶ Global recovery continued its momentum, judging by March's economic data releases. The US saw a stronger-than-expected revision to Q4 GDP. February's consumer expenditure, CPI and retail sales came in within expectations; while gains in the ISM manufacturing and non-manufacturing indices surpassed consensus expectations. The labor market saw strength in February with a stronger-than-expected increase in non-farm payrolls and low unemployment.
- ▶ In Europe, March's manufacturing and services PMI exceeded expectations, capping one quarter of straight PMI gains, and portending well for future growth. The final Q4 GDP print also did not fall short. The HICP fell in March, however, as energy and food inflation decreased.
- ▶ China's official manufacturing PMI outstripped forecasts, driven by increases in both production and demand. However, the Caixin manufacturing PMI, which more closely tracks export-oriented companies, posted an unexpected fall. PPI accelerated on rising commodity prices while CPI slowed from falling food prices.

Fig.5. OECD Composite Leading Indicator

CENTRAL BANKS

- ▶ In light of strong employment and inflation data, the Fed raised rates by 0.25%, to a target range of 0.75-1.00%.
- ▶ As expected, the Bank of England and Bank of Japan kept rates unchanged at 0.25% and -0.10% respectively.
- ▶ The ECB also held the main refinancing and deposit rate steady, while Draghi affirmed the continuance of monetary stimulus until a sustainable Eurozone recovery was evident.
- ▶ The PBOC increased borrowing costs following the Fed's rate hike, in ongoing moves to tighten liquidity.
- ▶ Russia's central bank unexpectedly reduced its rate by 0.25% to 9.75%, citing excessive disinflation and a promising economic recovery.
- ▶ In a bid to rein in inflation, Turkey's central bank lifted its late liquidity window rate by 0.75% to 11.75%, while keeping its main interest rates steady.
- ▶ During their March meetings, central banks in Australia, New Zealand, Canada, Switzerland and Denmark voted to keep rates steady.
