

Important Information

- Eastspring Investments - Asian Low Volatility Equity Fund is referred to as the 'Fund'.
- The Fund invests in equities and is exposed to the risk of market price fluctuations.
- Given the investment strategy of the Fund, investors should note that lower volatility does not necessarily mean low risk. The Fund may not produce lower price variability as compared to the overall market and the Fund may be precluded from fully capturing the upside in rising markets. The investments selected using the systematic models may perform differently than expected.
- The Fund invests primarily in the Asia Pacific ex Japan region and may be more volatile than a diversified fund.
- The Fund's investments in emerging markets subject it to greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The Fund may incur substantial losses if it is unable to sell those investments with high liquidity risks at opportune times or prices.
- The Fund may invest in securities denominated in currencies other than the Fund's base currency and may be exposed to currency and exchange rates risk.
- The Fund may use financial derivatives instruments (FDIs) for hedging and efficient portfolio management purposes. Using FDIs may expose the Fund to market risk, management risk, credit risk, counterparty risk, liquidity risk, volatility risk, operational risk, leverage risk, valuation risk and over-the-counter transaction risk. The use of such instruments may be ineffective and the Fund may incur significant losses.
- The Fund's Board of Directors may, at its discretion, pay dividends out of capital or gross income while charging all or part of the fees and expenses to the Fund's capital, resulting in higher distributable income. Thus, the Fund may effectively pay dividends out of capital. Payment of dividends out of capital (effectively or not) amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment, which may result in an immediate reduction of the net asset value per share.
- Investment involves risk. Investors should not rely solely on this document in making investment decision. Past performance information presented is not indicative of future performance.

Eastspring Investments – Asian Low Volatility Equity Fund (The “Fund”)

Invested in a smoother ride.

invested in a smoother ride.

COVID-19 has caused economic scarring across Asia. Although the region is still expected to expand by 5.2% in 2022 and 5.3% in 2023¹, the pace of recovery will not be even across the region given the varied nature of the economies. As Asian economies continue to develop and mature, there will be periods of economic rebalancing, which can trigger intermittent episodes of market volatility.

Asian markets are also typically more volatile than developed markets such as Japan, Europe and US. In the past ten years, Asia experienced higher drawdowns than the US and Europe during periods of heightened volatility.² An Asian low volatility strategy is thus compelling and will help investors better navigate the market volatility and stay invested over the long term.

A low volatility approach has historically allowed clients to participate in Asia's growth, while experiencing fewer losses on the downside. Investors who desire broader Asian equity exposure may consider complementing their portfolios with an Asian low volatility strategy.

¹Asian Development Bank, April 2022. ² Bloomberg, MSCI Indices, Eastspring Investments, 10 years (31 Mar 2012 – 31 March 2022).

Why invest in an Asian low volatility strategy?

➤ Enhances overall returns while reducing risk

By simply replacing some exposure in Asian equities with a low volatility Asian equity strategy, the portfolio would have achieved higher risk-adjusted returns over the last ten years.

Fig. 1. Better risk-return trade-off (10 years)

➤ Helps stay invested in the market

A low volatility portfolio typically experiences lower drawdowns, which helps investors stay invested during volatile times. This way, they reduce the risk of exiting right before a recovery and missing the market's best days.

► Gains more from a faster recovery

As a low volatility portfolio typically falls less than the market during turbulent times, it needs only to rise by a smaller magnitude to return to the starting level. Through compounding, the low volatility portfolio could accumulate more wealth over the long term.

Fig. 3. A low volatility portfolio typically recovers faster from market drawdowns

► Harnesses Asia's attractive dividends

With rising interest rates and surging commodity, energy, and food prices, dividend yielding stocks can act as a buffer against inflation. In the Asia Pacific ex Japan region, the number of stocks that have dividend yields above 3% is almost twice that of Europe and more than 3 times that of the US.

- Capitalises on low volatility's resilience

In recent years, market volatility has become more frequent with sharp and deep corrections. Thus a low volatility quantitative strategy is relatively more resilient than the broader Asian equities index and acts as a cushion.

Fig. 5. Relative resilience during volatile periods

R.I.D.E with Eastspring Investments – Asian Low Volatility Equity Fund

Resilience

The Fund allows investors to stay invested throughout the investment cycles as a low volatility strategy is relatively more resilient than the broader Asian equity strategy.

Income: 3.5 - 4% p.a.^ historical distribution payout

The Fund provides a regular distribution payout which helps to cushion against the current inflationary environment.

Differentiated investment approach

The Fund selects stocks on a combination of factors, not just low volatility. This approach has proven to be effective in minimising volatility at the portfolio level.

Expertise

The Fund is managed by an experienced team, who has been managing Low Volatility equities since 2013 with assets under management of USD1.9 billion

Classes of shares	Currency	Minimum Initial Investment	Minimum Subsequent Investment	Distribution Frequency ²	Annual dividend ² yield %	ISIN
Class A	USD	1,000	100	N.A	N.A	LU1522347837
Class A _{DM}	USD	1,000	100	Monthly	4.00	LU1497733557

Distributions are not guaranteed and may fluctuate. Past distributions are not necessarily indicative of future trends, which may be lower. Distribution payouts and its frequency are determined by the Board of Directors, and can be made out of (a) income; or (b) net capital gains; or (c) capital of the Fund or a combination of any of (a) and/or (b) and/or (c). The payment of distributions should not be confused with the Fund's performance, rate of return or yield. Any payment of distributions by the Fund may result in an immediate decrease in the net asset value per share. Funds with Monthly and Quarterly Distribution Frequency: Annualised Dividend rate = (Dividend per share / NAV per share of previous ex-dividend date) x (No. of calendar days in a year / No. of calendar days in distribution period) x 100%. Annualised Dividend Rate is calculated based on the dividend distribution for the relevant distribution period and does not refer to the dividend yield for the preceding 12 months, and it may be higher or lower than the actual annual dividend yield. "N.A.": This share class does not distribute dividends. For details of other fees and charges, please refer to the offering document.
