## **Asian Dynamic strategy**

# Why invest in Asia ex Japan equities?

We are firm believers in the long-term growth potential of Asia. Although Covid-19 has caused a reset in the region's growth trajectory, our investment thesis centered on Asia's middle-income growth, attractive demographics, technological innovation, and export growth continues to hold true. This heterogeneous region benefits from cultural and sector diversity and offers investors varied exposures to Asia's developed and emerging economies.

Despite these attractive demographic and fundamental growth drivers, Asian equity indices have lagged their global peers by a wide margin over the last decade. Rising equity risk premiums due to geopolitics and regulations, higher exposure to emission-sensitive industries and more recently, slower re-opening post Covid-19 have all led to lagging earnings per share growth for Asian companies and lackluster returns. This challenging backdrop has led to market indifference to Asian equities, low expectations for future returns, and hence light positioning by global investors.

While Asia's long-term investment attributes have not changed from the last decade, future expectations and starting valuations are different. At the current 1.5x trailing price-to-book ratio, we believe Asian equities provide an attractive risk/reward profile. See Fig 1.

Another growth driver which we believe will be transformative for Asian companies is the strategic shifts toward decarbonization, diversification of global supply chains and the higher cost of doing business. We are confident the resulting economic cycle from these strategic shifts are starting to revert investors' focus back to corporate profits and cashflows.

While the value style has more recently outperformed growth within the Asia ex Japan universe, we are confident there is considerable potential for further outperformance for value stocks in Asia; they remain attractively priced relative to growth and quality stocks within Asia. See Fig 2. The main driver of this valuation dispersion over the past decade has been a strong focus by investors in the e-commerce sector within Asia, which inflated valuations within growth and quality stocks beyond their underlying fundamentals.

# Why Eastspring for Asia ex Japan equities

Eastspring Investments, a Prudential plc company, is one of the largest Asia-based global asset managers, with Asia at its core. Since 1994, we have built an unparalleled local investment presence across in 11 Asian markets and distribution offices in North America and Europe.

Our purpose "Experts in Asia" is written to highlight not only the local expertise of our investment teams, but also the commitment we have made to Asia. Being close to many of the markets in which we invest in, we can create differentiated investment strategies to take advantage of opportunities within Asia, as well as manage global, Asian regional and single country investment capabilities on behalf of our clients.

Our Regional Asia Value Focus Team is comprised of five highly experienced investment professionals based in Singapore, with diverse nationalities and backgrounds and in-depth understanding of regional Asian markets. This small, dedicated team leverages the broader research expertise and infrastructure of Eastspring's 27 member Singapore based equity team and applies our valuation focused investment process to both developed and emerging Asia opportunities. The team seeks to build less correlated, high conviction portfolios of bottom-up opportunities where they have uncovered companies whose valuations diverge considerably from what we believe are their medium to longer-term intrinsic valuation.

# In a snapshot: Eastspring Asian Dynamic Strategy

- ➤ Generate competitive risk-adjusted returns by consistently applying a disciplined valuation-based approach to identify mis-priced stocks which we believe will outperform the market over the medium to long term.
- ➤ Construct a high conviction, concentrated portfolio of 30-40 best ideas across Asia ex Japan.
- Rather than following the herd and being influenced by behavioural biases, our longer-term mindset allows us to focus on sustainable earnings and potentially capture sizeable, mispriced opportunities.
- Our Regional Asia focus team consists of a diverse set of highly experienced managers with clearly defined responsibilities. They work within a unique culture that maximises challenge and debate.
- These factors are vital to executing our strategy and delivering repeatable performance to investors.

## Our Value approach to unlocking alpha in Asia ex Japan equities

We believe that the next five years are likely to be very different from the last decade as global market valuations and global central bank policies normalize. In response to the Global Financial Crisis, central banks and governments focused on easing monetary policy and strengthening the banking system. With no inflation, cheap money and excess liquidity, the market favoured the services, technology and other "new economy" sectors and companies which had capex/asset light business models. However, post COVID-19, what we see going forward are policy responses focused on productive assets, more capex spending, reshoring of manufacturing, supply chain diversification, and decarbonization - all which favour "real economy" sectors and companies. Against this dynamic, we are also seeing substantial inflationary pressures along with rising interest rates which historically are positive for value stocks while presenting headwinds for expensive growth and quality stocks.

A Value approach to Asian investing has delivered outperformance over the long term, taking a differentiated

approach can also give diversification benefits to clients. With 95% of our Asian equity peer group portfolios biased towards growth / quality investing, we believe our Strategy's portfolio of attractive Value stocks can offer prospects the compelling proposition of both potential upside capture and diversification away from their exposure to expensive growth / quality stocks. This diversification benefit is evidenced in Fig. 3.

Fig 3: Average correlation of active returns versus peer returns<sup>3</sup>

## How we build the strategy

## An ethical mantle

We believe the best investment decisions are made when environmental, social, and governance (ESG) factors are incorporated into our investment process.

- ▶ Eastspring Investments has an established responsible investing framework which includes stewardship and ESG policies that inform and govern our business and investment teams. Against this overarching stewardship framework, we have empowered each investment team to integrate these policies into their distinct investment approach and strategies, as we do believe there is a one size fits all approach to ESG application.
- We embed ESG impact into company valuations. We assess material ESG risks to sustainable earnings and monitor the progress of such risks and opportunities in our "ESG dashboard".
- We believe that engaging with investee companies on ESG issues is essential to understanding and protecting the portfolio from financial and non-financial risks. As such, we vote on all resolutions (except when it is not in the best interests of our clients).

## Investment philosophy

We believe that:

- Value style can generate superior long-term returns in Asian equities.
- Behavioural biases create a structural opportunity for us to exploit over time and we have seen a substantial valuation opportunity created in Asian equities over the last few years.
- Prices frequently move more than is justified due to shifts in investors' risk perceptions. True underlying value is not always reflected in stock prices. By detaching ourselves emotionally and with rigorous analysis and discipline over a longer time frame, we can exploit these opportunities.

### **Our investment process**

Our bottom-up, valuation-driven investment process has been designed to target mispriced equities in a disciplined and repeatable manner. It consists of four stages:

- ▶ Idea generation: We use proprietary screens to identify valuation outliers and to systematically exploit behavioural mispricing. In identifying these outliers, we can focus our research resources on only the best ideas.
- > Fundamental analysis: We conduct extensive fundamental research to understand key drivers of sustainable earnings and valuations, as well as what is being priced by the market. Stocks with the highest shared team conviction and best upside potential make it to our conviction list.
- **Portfolio construction**: We construct the portfolio with our highest conviction ideas while taking into account stock correlations and unintended risks. Stocks from this conviction list become the core positions in our Asian strategies.
- Risk control and review: Ongoing review of the portfolio helps instill process integrity and sell discipline. Our robust risk framework is conducted by the Asian focus team, senior management, and our independent risk oversight team.

# Asian Dynamic Lead Portfolio Manager

**Andrew Cormie**Portfolio Manager, Eastspring Singapore

All investment decisions and outcomes are shared across the Regional Asia Value Team. However, Andrew Cormie has the ultimate responsibility for daily monitoring of the portfolio, overseeing trades and position sizing. Andrew also works very closely with co-manager Sundeep Bihani.
