▪ The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity to pay you. **Be aware of currency risk.** You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. There are other risks materially relevant to the PRIIP which are not included in the summary risk indicator. For more information, please refer to the prospectus. This product does not include any protection from future market performance so you could lose some or all of your investment.

## Strategy overview

The team employs a dynamic investment approach as well as a rigorous credit research process that focuses on fundamental, valuation and technical factors.
