LIPPER LEADERS RATING (OVERALL)

Total Return	Consistent Return	Preservation	Lipper Leaders Key	
②	①	②	Lowest	①
			Highest	⑤

The Lipper Leaders Ratings System is a set of tools that guide investors and their advisors to select funds that suit individual investment styles and goals. It uses investors-centred criteria to deliver a simple, clear description of a fund's success in meeting certain goals, such as preserving capital or building wealth through consistent strong returns.

Lipper Leader ratings are derived from highly sophisticated formulas that analyse funds against clearly defined criteria. Each fund is ranked against its peers based on the metric used (such as Total Return or Expense), and then the top 20% of funds in that ranking receive the Lipper Leader designation. Lipper Leaders measures are not predictive of future performance, but they do provide context and perspective for making knowledgeable fund investment decisions.

FUND MANAGER'S COMMENTARY

The Fund declined by 2.72% in January 2024, underperformed the benchmark's return of +0.7%. The underperformance was dragged by exposure in the Hong Kong, China and Korea markets as well as selected exposure to India banks.

In the month of January, most markets within the MSCI Asia Pacific ex Japan (MXAPJ) index posted negative returns following 1) a more hawkish tone from the Fed which led to a surge in US bond yields and pushed back the rate cut expectations in March, 2) relatively disappointing earnings season and 3) weak sentiment in HK/ China on the back of the ongoing economic growth challenges and the lack of sufficient policy responses as well as reports of new US restrictions on China's biotech and tech segments. The best performing markets in January were Malaysia (driven by newly added constituents – YTL Power and YTL Corp and foreign buying into the bigger cap names) and Philippines (led by optimism over inflation moderating and interest rates to potentially ease) whilst worst performing markets were HK/ China and Korea (profit taking on memory semiconductor plays to rotate into stocks trading below book value following the potential implementation of the "Value-Up" program by the regulators). DXY appreciated by 1.9% mom in January given the continued US goldilocks outlook combined with higher US bond yields. Gold was relatively flat mom, but oil prices firmed up (Brent crude was up ~6% mom) as risks of transportation disruptions rose. Foreign flows tracked by Bloomberg showed Korea led the inflow, followed by Taiwan, Indonesia and Malaysia.
