FUND MANAGER'S COMMENTARY

In August, the Fund took advantage of the market correction in July to increase positions in AI-related semiconductor and hardware names, including NVIDIA, Broadcom, and Lumentum. The Fund also added to selected benchmark constituents across Taiwan, Korea, and Japan to reduce previous underweight positions relative to the benchmark. In addition, the Fund increased exposure to large-cap software names such as Microsoft and Alphabet (Google), as well as hardware leader Apple, narrowing the portfolio's weighting gap versus the benchmark. Overall, while maintaining a positive view on the long-term growth prospects of AI infrastructure and hardware supply chains, the Fund selectively increased exposure to key beneficiaries and adjusted positions in large-cap benchmark constituents to achieve a more balanced portfolio structure and closer alignment with benchmark weightings.

We remain constructive on the technology supply chain, particularly AI-related sectors. Key drivers include continued earnings upgrades across the AI ecosystem, stronger NeoCloud demand, and ongoing memory price increases into 4QCY26, while memory valuations remain attractive despite moderating price gains. We also see improving prospects for traditional servers as Agentic AI adoption expands, benefiting Intel and its supply chain. In addition, earnings momentum remains strong across memory, substrate, and passive component suppliers, while growing foundry capacity utilization and expansion should support semiconductor equipment makers.

Looking ahead, Agentic AI and AI training workloads are expected to drive sustained demand for advanced CPUs and GPUs. We remain positive on foundries, which should benefit from improving utilization rates and potential order spillovers from leading-edge AI demand. We also expect continued strength across the broader AI infrastructure supply chain, including servers, power equipment, substrates, thermal solutions, power supplies, optical components, and networking equipment. Given their dominant role in AI server production and expanding global market share, Asian suppliers remain key beneficiaries. Preferred beneficiaries include semiconductor equipment leaders and AI infrastructure suppliers.

We remain constructive on AI-related technology sectors, particularly semiconductors, semiconductor equipment, optical communication components, memory, and storage. Following the recent correction, valuations have become more compelling while underlying fundamentals remain intact. Accordingly, we maintain an overweight position in these areas. Although the portfolio retains exposure to software, our weighting remains below the benchmark, as we continue to favor AI semiconductors and hardware companies supported by sustained AI infrastructure investment, robust demand, and strong earnings growth visibility.
