Refer to “Risks” of the Prospectus for further information on risks of the product.

Market and Credit Risks

- **You are exposed to interest rate and credit risks.** The underlying fund invests in bonds which are subject to interest rate fluctuations and credit risks, such as risk of default by issuers.
- **You are exposed to currency risks.** The underlying funds’ investments may be denominated in currencies that differ from the currency of the Fund, and accordingly, fluctuations in the exchange rates of these foreign currencies may affect the value of your units. If you are holding units in the USD Class and Euro Class and your reference currency is Singapore Dollar, you may be exposed to additional exchange rate risks.
- **You are exposed to counterparty risks.** The Fund and its underlying funds will be exposed to the credit risk on counterparties with which it trades and any default by such a counterparty could result in substantial losses to the Fund.

- **You are exposed to liquidity risks of the underlying funds’ investments and your realisation request may be deferred or suspended.** The Fund may have investments which have high liquidity risks (for example, low trading volumes) and may incur substantial losses if it is unable to sell these investments at opportune times or prices. Under certain circumstances (not limited to the liquidity of the underlying investments in the underlying funds and the Fund) as detailed in the Prospectus, your realisation request may be deferred or suspended.

Product-Specific Risks

- **You are exposed to derivatives risks.** The Fund and/or the underlying funds may use derivative instruments for efficient portfolio management and/or hedging purposes. Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments.
