KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

The value of the product and its dividends or coupons (if any) may rise or fall. These risk factors may cause you to lose some or all of your investment:

Refer to “Risks” of the Prospectus for further information on risks of the product.

Market and Credit Risks

- **You are exposed to equity risks.** The Fund invests in equities and will be subject to risks such as fluctuations in market prices.
- **You are exposed to currency risks.** As the Fund may invest in securities which are denominated in foreign currencies, fluctuations in the exchange rates between the Singapore dollar and these foreign currencies may affect the income and value of the Fund.
- **You are exposed to counterparty risks.** The Fund will be exposed to the credit risk on counterparties with which it trades and any default by such a counterparty could result in substantial losses to the Fund.

Liquidity Risks

- **The Fund is not listed and you can realise your units only on Business Days.** There is no ready secondary market for the Fund. All realisation requests should be submitted in the manner set out in the Prospectus.
- **You are exposed to liquidity risks of the Fund’s investments and your realisation request may be deferred or suspended.** The Fund may have investments which have high liquidity risks (for example, low trading volumes) and may incur substantial losses if it is unable to sell these investments at opportune times or prices. Under certain circumstances (not limited to the liquidity of the underlying investments in the Fund) as detailed in the Prospectus, your realisation request may be deferred or suspended.

Product-Specific Risks

- **You are exposed to emerging markets risks.** The Fund invests in emerging markets which generally carry greater political, legal, tax, and regulatory risks than developed markets.
- **You are exposed to country risks.** As the Fund invests in Singapore and ASEAN markets, it is exposed to the market, currency, political, regulatory and other risks related to the economies of those countries. Investors should also note that the net asset value (“NAV”) of this Fund is likely to have higher volatility due to its concentration of investment in a single country or a limited number of countries.
- **You are exposed to derivatives risks.** The Fund may use derivative instruments for efficient portfolio management and/or hedging purposes. Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk, operational risk and leverage risk.
